Smart treadmill for gait rehabilitation

*Verticalization device for lower limb mobilization*

   @ezygain  [contact@ezygain.com](mailto:contact@ezygain.com)

[www.ezygain.com](http://www.ezygain.com)

The device verticalizes the user, thus simplifying the work of the caregiver. With 0 to 100% weight lightening from the pelvis, ema<sup>®</sup> secures your residents who are used to training on parallel bars and allow those in wheelchairs to exercise.

### Adapted

- Slow speeds, starts at 0.2 km/h
- Access ramp for wheelchairs
- Verticalization and security of a resident up to 130 kg

### Compact

- Less than 1m<sup>2</sup> folded and less than 2m<sup>2</sup> unfolded
- Moves easily on its wheels by one or two people

### Connected

- Compatible with most tablets
- In 3G, 4G or WiFi, your tablet communicates with the entire EzyGain community

### Affordable

- Different financing possibilities
- Direct sales or Leasing
- Training and maintenance

Patented in Europe and USA

**CE Medical**  
Made in France

### INSTANT REPORT

The EzyGain sensor system gives you access to:

- The percentage of weight relief
- The decomposition of the gait cycle
- The center of gravity position
- A personalized follow-up of the user
- Summary reports

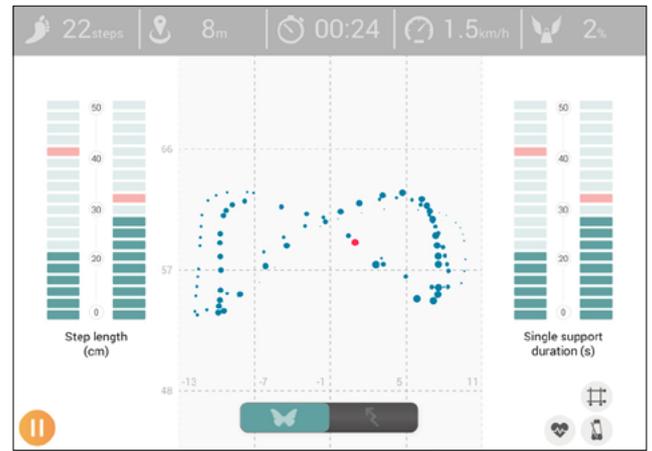

Printable results that can be integrated into any treatment software

Designed to be easy to use, ema® is compact and easily transportable. It is possible to install it in a small space without requiring any conversion. With ema®, the security is reinforced and the risk of falling is reduced, only one carer is then enough to verticalize the resident and offer him exercises.

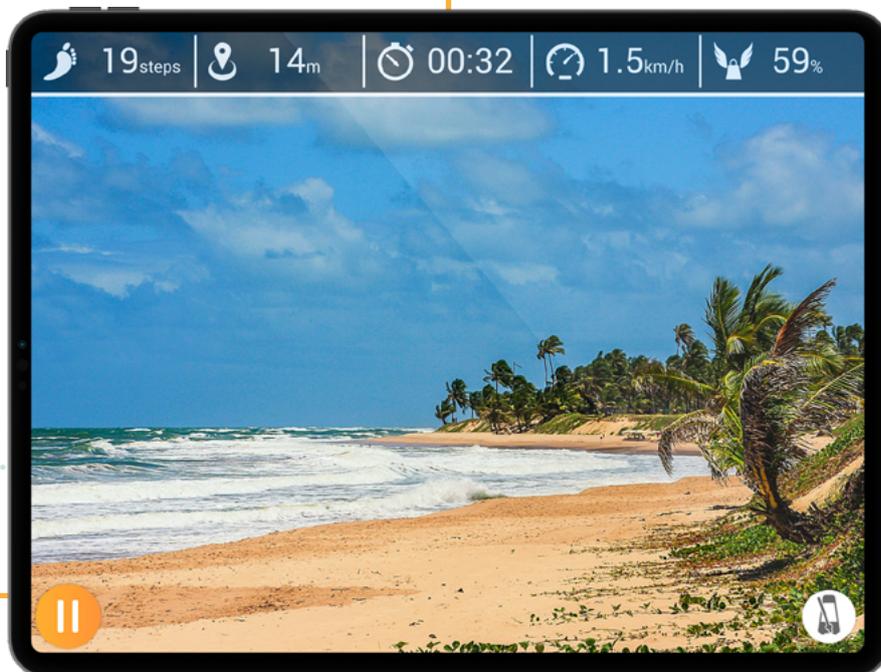

### Proprioception and balance

The treadmill stopped, the device then acts as a force platform. The balance exercises will encourage the resident to move his weight to the left, right, front and back in a playful context (mixing the ingredients of a soup, return different pairs of cards ...)

### Monitoring and gait analysis

The resident's progress as well as the evolution of his walking parameters are recorded in the app, allowing a personalized and objective follow-up of his progress.

### Various landscapes

ema® offers multiple walking landscapes that increase the resident's motivation and turn exercise into a fun and stimulating activity.

The resident can see his progression and his gait analysis in real time!

## EASY AND FAST INSTALLATION

The caregiver installs the harness to the resident in his wheelchair

The rehabilitation treadmill is lowered and ready for use

The access ramp allows installation on the treadmill

The resident is installed

The straps of the device attach to the harness

The resident is verticalized thanks to the lifting motor

The resident exercises his movements more easily thanks to the light weight

The harness allows the resident to avoid any risk of falling

Interaction mod is on!
